Quick Start Guide

Important Notice
Before unpacking this product further...
...did the Local Store check your postcode for reception?

Telephone number for your local store is on your till receipt, or visit
www.mastercare.co.uk
Should your store not be able to help please check the following Websites:
for Digital Terrestrial TV coverage:
www.freeview.co.uk
www.dtg.org.uk/consumer
for Digital Radio coverage:
www.digitalradionow.com

Please note: In order to receive quality digital signals you may need an aerial upgrade.

There are 3 main reasons why you may need to upgrade your aerial:
1. Your current aerial and cabling may not be able to receive all the digital channels due to their age and condition.
2. In your location the digital channels may be transmitted on a different frequency to your existing analogue signals and you may need a different type of aerial to receive them.
3. The new digital channels may be transmitted from a new transmitter and if this is the case the aerial would have to be re-aligned. Alternatively you could add a second aerial to your system.

For further information contact the digital helpline on:
08700 100484
Getting Started
Unpack your free to view digital receiver and check for the following accessories:

- User Manual
- Remote Control
- Batteries (for the remote control)
- SCART Cable

1. **Disconnect the power** to all your existing equipment.
2. **Place your receiver** in preferred position.
3. **Connect up** as shown in the diagram below:
   
   **NOTE:**
   
   a) If you wish to connect to a VCR and/or DVD then please refer to the additional connection diagrams shown in the main User Manual).
   b) Both live and recorded digital terrestrial television programmes are watched at a lesser quality via the TV aerial input only. To view via SCART, press the AV button on your TV remote control.

4. **Insert the batteries** into the remote control, making sure they are positioned the correct way round.
5. **Finally**, once all the connections have been made, **connect the power** and switch on all your equipment.
Switching on your Digital Receiver

When you plug in your receiver the power indicator light will glow green on the front panel and the Setup menu will appear on the TV screen.

Search for TV channels

Because this is the first time that the receiver has been used there are no channels stored in the receiver's memory.

(Note: If you do not see this menu on the TV screen, press the AV button on your TV remote control until you see the Setup screen.

Press OK on your remote control. Your Digital Receiver will now automatically search for all available channels. Please be patient, this process may take a few minutes. When completed, press the green button (OK). The first channel of the channel list is displayed and you can now watch digital terrestrial television using the PROG +/- buttons on your remote control.

Search for Radio channels

Press MENU on your remote control. You see the Main Menu. Use the left and right arrows and OK to select the Digital Radio icon. The first time you select Digital Radio a search will find all stations available to you.

Press the green button (OK) when the search is finished. A list of the available stations appears on screen. Press the Up and Down buttons to find the station you want to listen to and press OK to select the highlighted station. The volume is controlled by your TV remote. Press MENU at any time to take you back to the main menu.
**Reception Issues**
- If less than 10 TV channels are found, picture freezes, blanking out or blocking occurs, please re-check all connections and repeat the automatic tuning procedure.
- Persistent problems with setting up your receiver could be caused by incorrect signal levels. Your aerial system may need re-alignment or to be upgraded. Contact your retailer for details. Alternatively you can call the Digital Helpline on: **08700 100484**.

**ADDITIONAL INFORMATION:**

**REPEATED CHANNELS**
Depending on the reception conditions in your particular area, you may find that the list of channels found includes one or more repeated names. This is because the receiver may detect and store some channels, including those it cannot receive clearly, from adjacent areas alongside the strong channels from a transmitter nearby. This is not a problem and the weaker channels can be deleted from the receiver later, as described in the main User Manual.

**NO SIGNAL**
If no digital terrestrial television broadcasts are found, the receiver will display a ‘No signal’ message. If this happens refer to the Troubleshooting section in the main User Manual.

**STANDBY**
When you have finished watching TV or listening to digital radio, you can switch your DTAR10 to standby to save power by pressing the STANDBY button on the remote control.
